

# Manufacturing

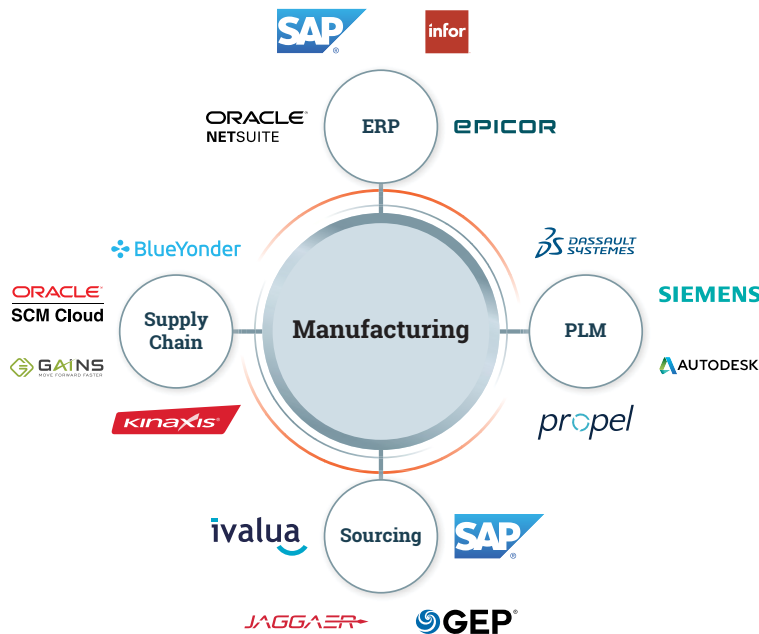

Get Connected and Increase Production

“ We estimate that using Jitterbit with its seamless integration with Salesforce saved us at least 33% on development time and costs.”

– Cornelius Msipha, BAP IT Applications Development, Bayer

Digitalizing every aspect of a manufacturing business can bring significant benefits. Automating processes and eliminating manual data entry increases accuracy and speeds up the entire manufacturing process. This allows manufacturing companies to bring products to market faster and meet customer needs effectively.

Jitterbit iPaaS, part of the low-code, AI-infused Jitterbit Harmony platform, connects manufacturing business processes to increase efficiency – making customer, order, inventory, pricing and distribution details available in any legacy or cloud application. This improves visibility into the supply chain, order status, customer satisfaction, new marketing opportunities, and other important aspects of the manufacturing and sales processes. With Jitterbit, manufacturing companies are better prepared to succeed in the digital world, no matter what they make.

## Benefits of Connectivity

- Automate and digitize processes across multiple systems, including MES, ERP, WMS, PLM, e-commerce and more
- Eliminate communication gaps between IT and manufacturing for faster time to market
- Generate more accurate demand forecasts to reduce inventories and avoid overproduction
- Track inventories against demand in real time across a growing footprint of suppliers and customers
- Gain full visibility into requirements, order status and supplier relationships for faster order fulfillment
- Bring all customer conversations across channels into one dashboard for real-time resolution of issues and greater customer satisfaction
- Automate the collection and tracking of data needed to comply with new regulations and emerging standards
- Access all documentation in one digital workflow to reduce bottlenecks in the order-to-cash process and improve order turnaround time
- Increase data accuracy and gain insight into machine health

# Enable Rapid Innovation with Jitterbit Harmony

Part of the Jitterbit Harmony platform, Jitterbit iPaaS offers a flexible, cost-effective way to connect systems, automate processes, and scale your business to become more efficient and effective. With hundreds of prebuilt integrations, Jitterbit iPaaS empowers line-of-business users to rapidly create new integrations. And with our robust AI capabilities, even users with no coding experience can quickly begin creating, designing and managing their own integration projects.

By using an intuitive platform that combines integration and APIs into one solution, enterprises can:

## Design Integrations

- Connect any data, application (SaaS, cloud, or on-premise), or device
- Intelligently map data fields
- Build powerful workflows
- Leverage AI chatbot to build integrations using natural language
- Automate business processes to streamline operations

## Deploy Anywhere

- Create and publish APIs internally or externally
- Run cloud, on-premise, or hybrid
- Create secure local connections with lightweight agents
- Scale elastically to meet needs in real time
- Count on high availability with smart agent groups

## Manage From Any Device

- Manage and maintain all integrations through a single console
- Provide secure access with user-based permissions
- Get real-time alerts and a complete audit trail
- Optimize intelligently across unlimited environments
- Manage your APIs and view enhanced analytics

## Connect to 1,000+ Endpoints

### APPLICATIONS

- Autodesk
- Epicor
- JDA
- Microsoft Dynamics
- NetSuite
- Oracle
- Sage
- Salesforce
- SAP
- and more...

### DATA FORMATS

- JSON
- XML (WSDL, XSD)
- All EDI (X12, EDIFACT, TRADACOMS, XML, CICA, HL7, etc.)
- Flat/Hierarchical Text Structures
- and more...

### OTHER PROTOCOLS

- JDBC/ODBC
- FTP
- File Shares
- LDAP
- SMTP/POP3
- and more...

### APIS

- Web Services (SOAP, REST), HTTP/S
- Custom API publishing and management
- OData Services

### EXISTING SOA PLATFORMS

- webMethods
- Tibco
- IBM WebSphere
- BEA WebLogic
- and more...

### DATABASES

- Oracle
- SQL Server
- DB2
- MySQL
- MongoDB
- and more...
