# NetSuite-Coupa Invoice and Payment Process Template

Jitterbit

Introduction

Transform your business spend by connecting your ERP and procurement systems with reusable integrations that help eliminate manual data entry and costly delays.

Jitterbit's NetSuite ERP-Coupa Invoice and Payment Process Template is a packaged solution of pre-built integrations that connects data and processes between these applications right out of the box. Automate invoicing and streamline payments by synchronizing User, Supplier, Items, Invoice, and Payments between systems.

This template includes pre-built integrations that connect commonly used objects and fields between NetSuite ERP and Coupa:

ORACLE NETSUITE — **Jitterbit** — **coupa**

Employee ⟲ **User**

An update of an Employee in NetSuite triggers an update to the User in Coupa. An update or creation of a User in Coupa triggers an update to the Employee in NetSuite, if the User exists. If the User does not exist, it is created in NetSuite.

Vendor → **Supplier**

A change to a NetSuite Vendor triggers an update to Coupa Supplier. If the Supplier is not found in Coupa, a Supplier is created in Coupa.

Items ← **Supplier Items**

A Supplier Item update in Coupa triggers an update to the Item in NetSuite, if the Item exists in NetSuite. If Item does not exist in NetSuite, it is created.

Vendor Bill ← **Invoice**

A new or updated Invoice in Coupa triggers an update or creation of a Vendor Bill in NetSuite.

Payments → **Payments**

A Bill Payment in NetSuite updates the Invoice Payment in Coupa.

BUSINESS PROBLEMS SOLVED:

- Easily connect Coupa to your NetSuite ERP system
- Automate invoice and payment processes
- Break down data silos between ERP and procurement systems

PROCESS TEMPLATE PACKAGE:

- Two endpoints: NetSuite ERP, Coupa
- Five pre-built integrations
- Delivery services provided by Jitterbit to deploy the Process Template (optional)

VALUE TO CUSTOMERS:

1. Packaged solution speeds integration and reduces technical resource requirements
2. Reusable integrations accelerate time to value
3. Pre-built workflows automate data synchronization between common objects such as User, Supplier, Items, and Payments
4. Integrated invoice and payments processes eliminate manual data entry, data exports, and costly delays

BUSINESS BENEFITS:

- **Drive greater efficiencies** in invoice and payments with a pre-built template that reduces custom coding and speeds automatic connections to commonly used objects, fields, and processes
- **Transform operations** with a complete picture of your invoice and payments so you can make smarter decisions faster
- **Optimize financial health** with quick, cost-effective integration that synchronizes data and processes between invoice and payment workflows
