# NetSuite-Coupa Master Data Management Process Template

Jitterbit

Introduction

Transform your business by connecting your ERP and procurement systems with reusable integrations that help eliminate manual data entry and costly delays.

Jitterbit's NetSuite ERP-Coupa Master Data Management Process Template is a packaged solution of pre-built integrations that connects data between these applications right out of the box. Integrate master data workflows by synchronizing Employee, User, Account, Vendor, Supplier, Cost Center, and Department between systems.

This template includes pre-built integrations that connect commonly used objects and fields between NetSuite ERP and Coupa:

ORACLE NETSUITE — **Jitterbit** — **coupa**

| Employee | 🔄 | User |

An update of an Employee in NetSuite triggers an update to the User in Coupa.
An update or creation of a User in Coupa triggers an update to the Employee in NetSuite, if the User exists. If the User does not exist, it is created.

| Account | → | Account |

An update or creation of a NetSuite Account triggers an update to Coupa Account. If the Account is not found in Coupa, an Account is created.

| Vendor | → | Supplier |

An update or change to a NetSuite Vendor triggers an update to Coupa Supplier. If the Supplier is not found in Coupa, a Supplier is created.

| Department | → | Look-up (Cost Center) |

An update or change to a NetSuite Department triggers an update to Coupa Look-up (Cost Center). If the Look-up (Cost Center) is not found in Coupa, it is created.

BUSINESS PROBLEMS SOLVED:

- Easily connect Coupa to your NetSuite ERP system
- Automate synchronization of master data
- Reduce data errors from manual entry

PROCESS TEMPLATE PACKAGE:

- Two endpoints: NetSuite ERP, Coupa
- Four pre-built integrations
- Delivery services provided by Jitterbit to deploy the Process Template (optional)

VALUE TO CUSTOMERS:

1. Packaged solution speeds integration and reduces technical resource requirements
2. Reusable integrations accelerate time to value
3. Pre-built workflows automate data synchronization between common objects such as User, Account, Supplier, Vendor, and Departments
4. Integrated master data eliminates manual data entry, data exports, and costly delays

BUSINESS BENEFITS:

- **Improve data quality** with pre-built integrations that help deliver a single source of truth
- **Transform operations** with a complete, accurate picture of your master data so you can make smarter decisions faster
- **Meet rising customer expectations** with quick, cost-effective integration that synchronizes data between ERP and procurement systems
